DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

The term "lowest" in claim 1 is a relative term which renders the claim indefinite.

The term "lowest" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 2-4 are rejected under 35 U.S.C. 102(e) as being anticipated by McTague
(US Patent 6,549,967)

As per claims 1 and 3, McTague discloses an information processing apparatus comprising

- network-card-recognizing means that recognizes network cards that are mounted therein (col.4, lines 1-51), (col.1, lines 42-53)

- degree-of-demountability storage means that stores therein the degrees of demountability of the network cards the network-card-recognizing means recognizes (col.4, line 1-col.5, line 11)
- for-main-apparatus-body identifier production means that, according to the identifier of the network card, the degree of demountability of that is corresponding to the network cards the network-card-recognizing means has recognized, stored in the degree-of-demountability storage means, produces the main-apparatus-body identifier for use on a network. (col.4, line 54-col.5, line 11), (col.2, line 15-67)

complexity

As per claims 2 and 4, McTague discloses wherein the demountability is a facility of structurally detaching a network card or a frequency of uses or a type of card. (col.4, line 54-col.5, line 11), (col.4, lines 1-5)
